Some were working-class,
others upper-class

...the whole is more
than the sum of the parts...

Bakvattenbinge
Rise and gather moss

So an enormous amount of work
has gone into this, to set this up.
CAMO

DAS KLIMA
Die Faktoren des Klimas — Temperatur, Niederschlag, Wind, Licht und ihr merkwürdiges Zusammenspiel haben eine entscheidende Bedeutung für den Zuwachs des Waldes.
Klimatets faktorer — temperatur, nederbörd, vind, ljus — och deras märkliga samspel har avgörande betydelse för skogens växt.
6 7
Silvanum has infiltrated the wall and floors, the foundational structure and reclaimed this place as an archive of the forest.
The forest might not seem what it is, as it exist in different time frames, in gaps between the imagined, dreamed and recorded.
Someone is observing, on the periphery of the site, from the darkened horizon at the edge of the tree line. This place of observations is being monitored. The light is slowly failing and the elusive outer is moving closer. The conifers are sending out rings, they overlap. The sense of another presence comes though an unfolding register, life forms move closer and interconnect.
The drifting woods are in a slumber. They evolve in suspense, of growing interiority and outward expression, as a system that is not accelerating its own destruction in the absence (or presence) of movements.

In the herbarium there are listings of sites we no longer have
names for, as they have been replaced with a thick forestland.

Such an amazing discover!
